

# ASCII Keyboard Tester Tiny

## Bill of Materials

8BitFlux.com

Part	Value	Remarks	Qty	Reference	Provided
Standoffs	M3	nylon stands 10mm	4		
	M3	nylon nuts	4		
	M3	rubber end cap 3 mm <sup>1</sup>	3		
Pin header	1 x 4 pin	male horizontal	1	J1	
	8 pin	female in-line machined pin socket ( <i>back side</i> )	4	J5-J8	
Socket	14 pins	machined pin	1	U2	
	16 pins	machined pin	1	U3	
	16 pins	double spring contact, for easy insertion	2	J2, J3	
	16 pin	male-male DIP IC adapter rounded pins	1	J5-J8	
	20 pins	machined pin	1	U1	
Resistor <sup>2</sup>	82 kΩ	1/4 W - grey, red, black, red, brown	2	R1, R2	
Resistor Net	330 Ω	5x resistor, 6 legs	2	RN1, RN2	
	2,2 kΩ	5x resistor, 10 legs	1	RN3	
Capacitor	100 nF	marked with '104'	1	C1	
	10 μF	elco radial	2	C2, C3	
IC	74LS00	Quad 2-Input NAND Gate <sup>3</sup>	1	U2	
	74LS123	Retriggerable Monostable Multivibrator	1	U3	
	74LS374	Octal D-Type Edge Triggered Flip-Flops 3-State	1	U1	

### Notes:

- 1) When mounted on top of an Apple-1 or Apple II: screw (turn clockwise) and push the rubber end caps in the bottom side of the stands. This to protect the Apple computer mainboard. The fourth standoff at the bottom-left corner can be left out.
- 2) Some provided resistor-values could differ slightly, as could their band colors, this has no effect on the working of the board.
- 3) This IC has 4 NAND gates, 1 of them is unused and can be used as a spare.

Part	Value	Remarks	Qty	Reference	Provided
<b>Switch</b>	SPST	2x DIP Switch ON-OFF for settings	<b>1</b>	SW1	
<b>LED <sup>4</sup></b>	red	5 mm, round	<b>8</b>	D1-D8	
	white	5 mm, round	<b>2</b>	D9, D10	
	yellow	5 mm, round	<b>1</b>	D12	
	orange	5 mm, round	<b>1</b>	D11	
<b>Misc</b>	adhesive felt	affix on the backside, see markings on PCB	<b>1</b>		
		<b>Parts</b>	<b>47</b>		
		<b>Types</b>	<b>24</b>		

#### Notes:

- 4) When preferred, other LED colors can be used. Make sure to check if the values of the resistor networks RN1-RN3 are correct for the LEDs used.

#### Important:

- Use the 16 pin male-male DIP IC adapter as a guide to solder the 8 x 8 pin female in-line machined pin socket perfectly right-angled (at positions J5-J8).
- Before applying power, check J2-J8 for shorts between all side to side pins using a multimeter in continuity mode.
- **Affix the adhesive felt** on the solder side of the board, as indicated by the dotted rectangle. Otherwise soldered pins can come in contact with the ICs of the Apple computer.
