

Pieco

PASTE PRESS

The Pieco Paste Press works like a miniature caulking gun. It's the best way to easily and accurately apply solder paste, SMD adhesives, and other high-viscosity pastes and liquids.

Directions

1. Press trigger while fully pulling the plunger upwards. Release trigger.
2. Remove syringe endcap, attach dispensing tip, and insert 10cc syringe into the Paste Press.
3. Push the plunger downwards until it makes firm contact with the stopper inside the syringe.
4. Gently squeeze the lever to dispense syringe contents.

Tips

Dispensing should take little effort. If not, try a material with lower viscosity, a finer grade of solder paste, or a thicker dispensing needle or nozzle.

If material continues to dispense even after releasing the lever, first depress the trigger, then try the lever again using less force.

Pieco recommends Type 5 solder paste for dispensing with needles or nozzles finer than 20 gauge.
