

Congratulations on entering the world of JankDek! An ancient proverb states that a journey of a thousand miles begins with a single step, and you've chosen to take that step with a sneaker held together with bubblegum and duct tape. Good for you! Let's get you from step 1 to step...well, not one thousand, but close enough. First, some info to get familiar:

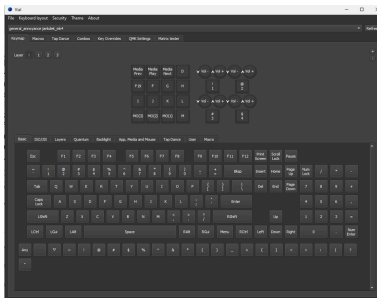

Step 1. Unbox your JankDek. Bask in the soft matte glow of saving money.

Step 2. Get a USB to USB-C cable and connect your JankDek to your computer. Feel the power.

Step 3. Download Vial from here: get.vial.today

Vial is how you separate the Jank from the Dek. This is where you can assign keys, create macros, and really unlock the full potential that JankDek has to offer.

Step 4. Check it out! Your JankDek is aliiive. You should see a representation of the jankdek in the app. You can click on each button in the graphic, then assign a key to it through the large, large selection of options in the lower section.

The LEDs on the jankdek indicate power (far left) and active layer (the rest). Play with the layers, you'll figure it out.

Now, the world is your Dek. Here's some ideas to get you started:

- Map media control keys
- Create text chat macros
- Use the magical F13-F24 keys to control scenes or volumes in OBS
- Bind a soundboard
- Bind every key to "Power off PC"
- Explore all the possibilities of QMK
- Create custom keybinds in your favorite CAD program

need help? please let me know. seriously. if you have any issues or questions whatsoever, I want to hear about it. there's always improvements and updates to be made.

you can email me here:

feedback@jank.enterprises

bet you thought there was going to be something on the back.

nope. just a thank you. so, thank you. every purchase makes
this project just a little bit easier.
