

1 trng_client

trng_client — A tool to write data received from trng_server to files.

Synopsis

trng_client *HOST_IP PORT*

DESCRIPTION

trng_client allows to write data from trng_server to local files. This is a simple interactive program, it ask how many mega bytes of data to get, write it to a file, then loop. The generated files are named sequentially "reply_0.dat", "reply_1.dat" and so on.

HOST_IP

IP address of the machine on which trng_server runs.

PORT

UDP port number opened by trng_server.

EXAMPLES

trng_client 127.0.0.1 1234

Start the client. Requests will be sent to trng_server running on the same machine (127.0.0.1 is the local machine by convention), on UDP port 1234.

BUGS

Please report bugs by email: trng@kidekin.nimp.co.uk
