

## TPS22860 Ultra-Low Leakage Load Switch

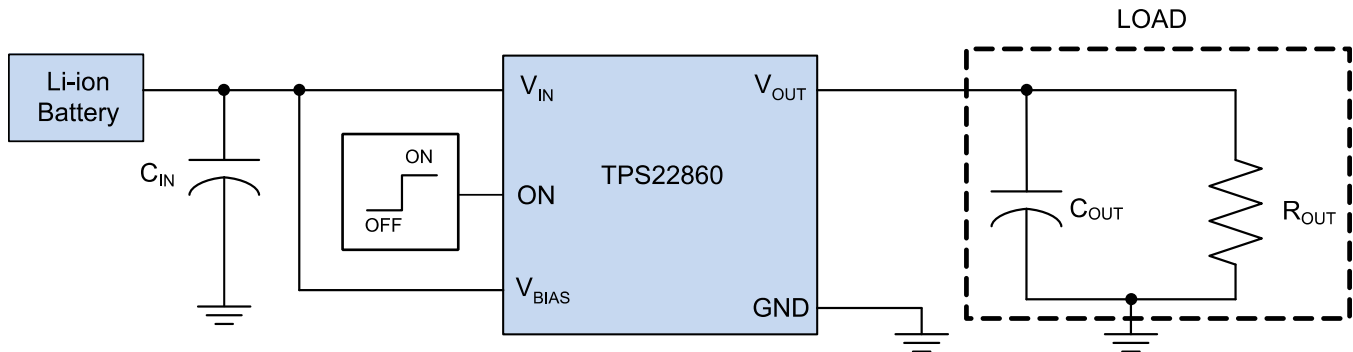

### 1 Features

- Integrated Single Channel Load Switch
- Bias Voltage Range ( $V_{BIAS}$ ): 1.65 V to 5.5 V
- Input Voltage Range: 0 V to  $V_{BIAS}$
- ON-Resistance ( $R_{ON}$ )
  - $R_{ON} = 0.73 \Omega$  at  $V_{IN} = 5 \text{ V}$  ( $V_{BIAS} = 5 \text{ V}$ )
  - $R_{ON} = 0.68 \Omega$  at  $V_{IN} = 3.3 \text{ V}$  ( $V_{BIAS} = 5 \text{ V}$ )
  - $R_{ON} = 0.63 \Omega$  at  $V_{IN} = 1.8 \text{ V}$  ( $V_{BIAS} = 5 \text{ V}$ )
- 200 mA Maximum Continuous Switch Current
- Ultra-Low Leakage Current
  - $V_{IN}$  Leakage Current = 2 nA
  - $V_{BIAS}$  Leakage Current at 5.5 V = 10 nA
- 6-pin SOT-23 or SC70 Package
- ESD Performance Tested per JESD 22
  - 2 kV HBM and 1 kV CDM

### 2 Applications

- Wearables
- Internet of Things
- Wireless Sensor Networks

### 4 Common Application Schematic

### 3 Description

The TPS22860 is a small, ultra-low leakage current, single channel load switch. The device requires a  $V_{BIAS}$  voltage and can operate over an input voltage range of 0 V to  $V_{BIAS}$ . It can support a maximum continuous current of 200 mA. The switch is controlled by an on/off input (ON), which is capable of interfacing directly with low-voltage control signals. The TPS22860 is available in two small, space-saving 6-pin SOT-23 and SC70 packages. The device is characterized for operation over the free-air temperature range of  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPS22860	SOT-23	2.80 x 2.90 mm
	SC-70	2.10 x 2.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 5 Revision History

DATE	REVISION	NOTES
April 2015	*	Initial release.

## 6 Pin Configuration and Functions

Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
V <sub>OUT</sub>	1	O	Switch output.
GND	2	—	Ground
NC	3	—	No connect
V <sub>IN</sub>	4	I	Switch input. Connect a ceramic capacitor from V <sub>IN</sub> to GND.
V <sub>BIAS</sub>	5	I	Bias voltage. Power supply to the device.
ON	6	I	Active high switch control input. Do not leave floating.

## 7 Specifications

### 7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup>

		MIN	MAX	UNIT <sup>(2)</sup>
V <sub>BIAS</sub>	BIAS voltage range	−0.5	6.5	V
V <sub>IN</sub>	Input voltage range	−0.5	V <sub>BIAS</sub> + 0.5	V
V <sub>OUT</sub>	Output voltage range	−0.5	V <sub>BIAS</sub> + 0.5	V
V <sub>ON</sub>	Input voltage range	−0.5	6.5	V
I <sub>MAX</sub>	Maximum Continuous Switch Current		200	mA
I <sub>PLS</sub>	Maximum Pulsed Switch Current, pulse <300us, 2% duty cycle		400	mA
T <sub>A</sub>	Operating free-air temperature range <sup>(3)</sup>	−40	85	°C
T <sub>J</sub>	Maximum junction temperature		125	°C
T <sub>STG</sub>	Storage temperature	−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to network ground terminal.
- (3) In applications where high power dissipation and/or poor package thermal resistance is present, the maximum ambient temperature may have to be derated. Maximum ambient temperature [T<sub>A(max)</sub>] is dependent on the maximum operating junction temperature [T<sub>J(max)</sub>], the maximum power dissipation of the device in the application [P<sub>D(max)</sub>], and the junction-to-ambient thermal resistance of the part/package in the application (θ<sub>JA</sub>), as given by the following equation: T<sub>A(max)</sub> = T<sub>J(max)</sub> − (MJA × P<sub>D(max)</sub>)

### 7.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge		
	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	2000	V
Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	1000		

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions.

### 7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V <sub>IN</sub>	Input voltage range	0		V <sub>BIAS</sub>	V
V <sub>BIAS</sub>	Supply voltage range	1.65		5.5	V
V <sub>ON</sub>	Control input voltage range	0		5.5	V
V <sub>OUT</sub>	Output voltage range	0		V <sub>BIAS</sub>	V
V <sub>IH, ON</sub>	High-level input voltage, ON	V <sub>BIAS</sub> = 5 V		5.5	V
V <sub>IL, ON</sub>	Low-level input voltage, ON	V <sub>BIAS</sub> = 5 V		0.8	V
C <sub>IN</sub>	Input Capacitor	1			μF

### 7.4 Thermal Information

THERMAL METRIC <sup>(1)(2)</sup>		TPS22860		UNIT
		DBV	DCK	
		6 PINS	6 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	235.2	249.0	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	164.8	107.7	
R <sub>θJB</sub>	Junction-to-board thermal resistance	82.5	95.8	
ψ <sub>JT</sub>	Junction-to-top characterization parameter	52.9	6.2	
ψ <sub>JB</sub>	Junction-to-board characterization parameter	82.0	93.7	

 (1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](#).

 (2) For thermal estimates of this device based on PCB copper area, see the [TI PCB Thermal Calculator](#).

### 7.5 Electrical Characteristics

 over operating free-air temperature range<sup>(1)</sup> (unless otherwise noted)

PARAMETER	TEST CONDITIONS		MIN	TYP	MAX	UNIT		
<b>POWER SUPPLIES AND CURRENTS</b>								
I <sub>Q, VBIAS</sub>	V <sub>BIAS</sub> quiescent current	I <sub>OUT</sub> = 0, V <sub>IN</sub> = V <sub>ON</sub> = V <sub>BIAS</sub> = 3.3 V		10	100	nA		
I <sub>SD, VBIAS</sub>	V <sub>BIAS</sub> shutdown current	V <sub>ON</sub> = 0 V		10	100			
I <sub>SD, VIN</sub>	V <sub>IN</sub> shutdown current	V <sub>ON</sub> = 0 V, V <sub>OUT</sub> = 1 V	V <sub>IN</sub> = 3.0 V	2	50			
I <sub>ON</sub>	ON pin input leakage current	V <sub>ON</sub> = 5.5 V			100			
<b>RESISTANCE CHARACTERISTICS</b>								
R <sub>ON</sub>	ON-state resistance	I <sub>OUT</sub> = -100 mA, V <sub>BIAS</sub> = 3.3 V	V <sub>IN</sub> = 3.3 V	T <sub>A</sub> = 25°C	0.92	1.15	Ω	
				Full T <sub>A</sub>		1.31		
			V <sub>IN</sub> = 2 V	T <sub>A</sub> = 25°C		1.2		1.5
				Full T <sub>A</sub>				1.7
V <sub>IN</sub> = 1.8 V	T <sub>A</sub> = 25°C		0.95	1.2				
	Full T <sub>A</sub>			1.35				

 (1) Over the operating ambient temp -40°C ≤ T<sub>A</sub> ≤ 85°C (full) and V<sub>BIAS</sub> = 3.3V. Typical values are for T<sub>A</sub> = 25°C. (unless otherwise noted)

### 7.6 Switching Characteristics

 over operating free-air temperature range<sup>(1)</sup> (unless otherwise noted)

PARAMETER	TEST CONDITIONS		MIN	TYP	MAX	UNIT	
t <sub>ON</sub>	V <sub>OUT</sub> = V <sub>BIAS</sub> , R <sub>L</sub> = 50 Ω	C <sub>L</sub> = 35 pF	T <sub>A</sub> = 25°C	V <sub>BIAS</sub> = 3.3 V	2	4.5	13
			Full T <sub>A</sub>	V <sub>BIAS</sub> = 3 V to 3.6 V	1		
t <sub>OFF</sub>	V <sub>OUT</sub> = V <sub>BIAS</sub> , R <sub>L</sub> = 50 Ω	C <sub>L</sub> = 35 pF	T <sub>A</sub> = 25°C	V <sub>BIAS</sub> = 3.3 V	3	9	15
			Full T <sub>A</sub>	V <sub>BIAS</sub> = 3 V to 3.6 V	2		
t <sub>ON/OFF</sub>	ON/OFF delay time		See <a href="#">Figure 9</a>				

 (1) V<sub>IN</sub> = V<sub>ON</sub> = V<sub>BIAS</sub> = 5V, T<sub>A</sub> = 25°C

### 7.7 Typical Characteristics

Typical Characteristics (continued)

Figure 7. Power-Supply Current vs Temperature  
( $V_{BIAS} = 5\text{ V}$ )

## 8 Detailed Description

### 8.1 Overview

The TPS22860 is a small, ultra-low leakage current, single channel bi-directional load switch. The device requires a  $V_{BIAS}$  voltage and can operate over an input voltage range of 0 V to  $V_{BIAS}$ . It can support a maximum continuous current of 200 mA. The switch is controlled by an on/off input (ON), which is capable of interfacing directly with low-voltage control signals. The TPS22860 is available in two small, space-saving 6-pin SOT-23 and SC70 packages. The device is characterized for operation over the free-air temperature range of  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

### 8.2 Functional Block Diagram

### 8.3 Feature Description

#### 8.3.1 ON/OFF Control

The ON input controls the load switch with positive logic.

#### 8.3.2 Pass Transistor

The TPS22860 supports up to 200-mA current flow in either direction.  $R_{ON}$  is dependent on  $V_{BIAS}$  as shown in [Figure 1](#), [Figure 2](#), and [Figure 3](#).

### 8.4 Device Functional Modes

**Table 1. Functional Table**

ON	$V_{IN}$ to $V_{OUT}$
L	Off
H	On

## 9 Application and Implementation

### NOTE

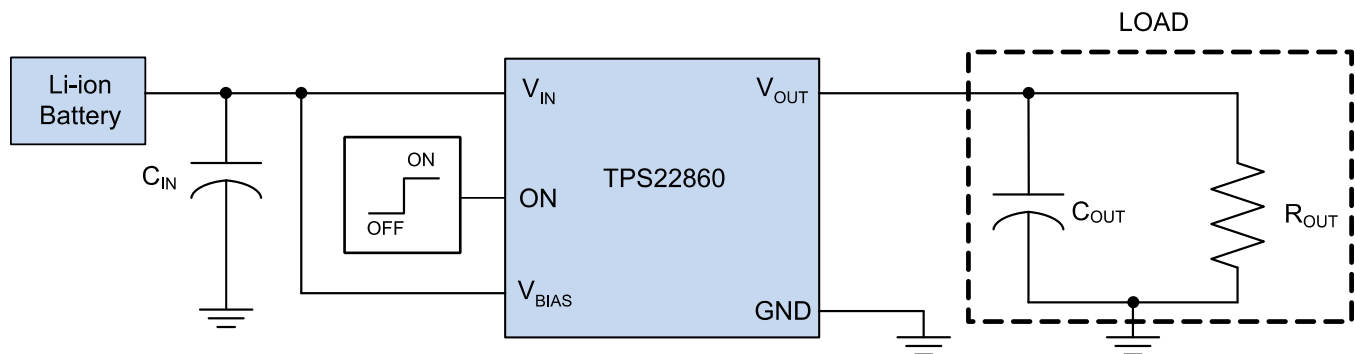

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

This section will highlight some of the design considerations when implementing this device in a common application.

### 9.2 Typical Application

The TPS22860 IC is a high side load switch. The TPS22860 internal components are rated for 1.65-V to 5.5-V supply and support up to 200 mA of load current. The TPS22860 can be used in a variety of applications. [Figure 8](#) below shows a general application of TPS22860 to control the load inrush current.

**Figure 8. Standard Load Switching Application**

#### 9.2.1 Design Requirements

**Table 2. Component Table**

COMPONENT	DESCRIPTION
$C_{IN}$	Input capacitance <sup>(1)</sup>
LOAD	Load resistance and capacitance will affect the output rise time

(1) Required for load inrush current (slew rate) control

## 9.2.2 Detailed Design Procedure

### 9.2.2.1 Inrush Current

To limit the voltage drop on the input supply caused by transient inrush currents when the switch turns on into a discharged load capacitor, a capacitor must be placed between  $V_{IN}$  and GND. A 1- $\mu$ F ceramic capacitor,  $C_{IN}$ , placed close to the pins, is usually sufficient. Higher values of  $C_{IN}$  can be used to further reduce the voltage drop during high-current applications. When switching heavy loads, TI recommends to have an input capacitor about 10x higher than the output capacitor to avoid excessive voltage drop. Do not float the ON pin.

### 9.2.2.2 ON/OFF Interface

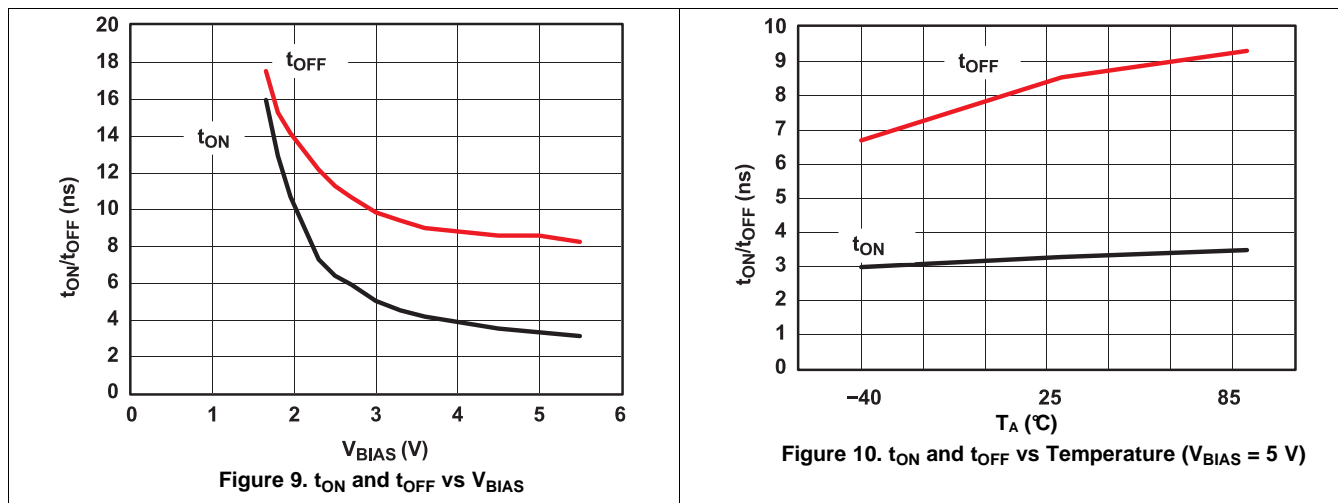

The load switch is controlled by the voltage at the ON pin. To turn ON, the input voltage must be larger than  $V_{IH}$  and to turn off the voltage must be below  $V_{IL}$ .

In applications where an ON/OFF signal is not available, connect ON pin to  $V_{IN}$ . The TPS22860 will turn ON/OFF in sync with the input supply connected to  $V_{IN}$ .

#### NOTE

Connect a pull down resistor from the ON pin to GND when the ON/OFF signal is driven by a high-impedance (tri-state) driver.

## 9.2.3 Application Curves

## 10 Power Supply Recommendations

The device is designed to operate from a  $V_{IN}$  range of 1.65 V to 5.5 V. This supply must be well regulated and placed as close to the device terminal as possible with the recommended 1- $\mu$ F bypass capacitor. If the supply is located more than a few inches from the device terminals, additional bulk capacitance may be required in addition to the ceramic bypass capacitors. If additional bulk capacitance is required, an electrolytic, tantalum, or ceramic capacitor of 1  $\mu$ F may be sufficient.

## 11 Layout

### 11.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

- $V_{IN}$  and  $V_{OUT}$  traces should be as short and wide as possible to accommodate for high current.
- The  $V_{IN}$  pin should be bypassed to ground with low ESR ceramic bypass capacitors. The typical recommended bypass capacitance is 1- $\mu$ F ceramic with X5R or X7R dielectric. This capacitor should be placed as close to the device pins as possible.
- The  $V_{OUT}$  pin should be bypassed to ground with low ESR ceramic bypass capacitors. The typical recommended bypass capacitance is one-tenth of the  $V_{IN}$  bypass capacitor of X5R or X7R dielectric rating. This capacitor should be placed as close to the device pins as possible.

### 11.2 Thermal Reliability

For higher reliability it is recommended to limit TPS22860 IC's die junction temperature to less than 105°C. The IC junction temperature is directly proportional to the on-chip power dissipation. Use the following equation to calculate maximum on-chip power dissipation to achieve the maximum die junction temperature target:

$$PD_{(MAX)} = \frac{(T_{J(MAX)} - T_A)}{\theta_{JA}}$$

Where:

$T_{J(MAX)}$  is the target maximum junction temperature.

$T_A$  is the operating ambient temperature.

$R_{\theta JA}$  is the package junction to ambient thermal resistance.

(1)

### 11.3 Improving Package Thermal Performance

The package  $R_{\theta JA}$  value under standard conditions on a High-K board is listed in the [Thermal Information](#) table.  $R_{\theta JA}$  value depends on the PC board layout. An external heat sink and/or a cooling mechanism, like a cold air fan, can help reduce  $R_{\theta JA}$  and thus improve device thermal capabilities. Refer to TI's design support web page at [www.ti.com/thermal](http://www.ti.com/thermal) for a general guidance on improving device thermal performance.

### 11.4 Layout Example

⊥ Indicates connection to ground plane

**Figure 11. Basic PCB Layout**

## 12 Device and Documentation Support

### 12.1 Trademarks

All trademarks are the property of their respective owners.

### 12.2 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 12.3 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TPS22860DBVR	ACTIVE	SOT-23	DBV	6	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	ZFNR	Samples

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TAPE AND REEL INFORMATION

### QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - Leads 1,2,3 may be wider than leads 4,5,6 for package orientation.
- ⚠ Falls within JEDEC MO-178 Variation AB, except minimum lead width.

DBV (R-PDSO-G6)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - D. Publication IPC-7351 is recommended for alternate designs.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
