

Raspberry Case Classic

It isn't necessary to screw on the Raspberry Pi onto the wooden bottom plate, it's your choice. If you decide to screw on the Raspberry Pi onto the bottom plate, for a better mounting you can drill out the Raspberry Pi mounting holes with a 3 mm mill.

Be careful when closing the lid of your Raspberry Classic case, don't press too hard. The lid must close smooth. You can use sandpaper to abrade the bars on the lid so it closes better, look at the picture.

Have fun !
